

CASDevU: Open Issues and Refinements

Bukidnon State University, Culture, Arts, and Sports Development Unit

Prepared 27 September 2026 against commit 5fd5187 on main, from code review, a role-by-role crawl of the running system, and browser tests at 320-2560 px.

Group	Items	What it covers
A. Issues to fix	5	Behaviour that is wrong or can be misused. Item A1 is the only one that can change stored data.
B. Layout refinements	6	Visual polish: short screens, wrapping, consistency between pages.
C. Decisions needed	3	Choices for the unit or the team, not code defects.
D. Not yet verified	5	Paths not exercised in testing; they may be fine but have no evidence yet.

A. Issues to fix

Ordered by impact. Each was confirmed in the code or by reproducing it.

#	Issue	Where	Priority	Suggested fix
A1	Attendance can be recorded for any registration. The page only shows the Present button for approved participants, but the server's attendance action accepts any registration of the activity, so a crafted or stale request can mark a pending, rejected or withdrawn student present. That would skew attendance reports.	public/participation/participants.php, the <i>attendance</i> case	Medium	Refuse the action unless the registration is approved (or completed, if attendance may still be corrected afterwards). Add it to <code>registration_actions()</code> so buttons and server share one rule.
A2	"Go back" depends on JavaScript and can loop. It is a <code>javascript:history.back()</code> link: with scripts off it does nothing, and going back can show the cached form with the same expired token, which fails again.	includes/errors.php, <code>abort_page()</code>	Low	Link to the same-site page the visitor came from (the Referer, checked against the host), which loads a fresh form. Leave the button out when there is no usable referrer.
A3	Crash screen offers "Back to the dashboard" to signed-out visitors. It works (they land on Sign in) but the label is wrong for them.	includes/errors.php, <code>render_error_page()</code>	Low	Use the same signed-in check as <code>abort_page()</code> : Back to the dashboard when signed in, Sign in otherwise.
A4	Garbled announcement repaired only locally. The seed files are fixed (SET NAMES utf8mb4), but any database already imported elsewhere (a server, a teammate's copy) still shows "ÔÇö" instead of an em dash.	announcements table on other installs	Low	Run the one-statement repair in the appendix on each existing database, or re-import the seed files.
A5	Inline script on the Reject button. It reveals the reason form with an onclick attribute, unlike the rest of the app, which keeps scripts in <code>app.js</code> . This blocks adopting a strict Content Security Policy later.	public/participation/participants.php	Low	Replace with a data attribute handled in <code>app.js</code> , like the password toggle.

B. Layout refinements

Nothing here blocks use; these make the interface tidier.

#	Issue	Where	Priority	Suggested fix
B1	Error screens on very short screens. At 640×480 (also 200% browser zoom on a laptop) the page scrolls 58 px and the card sits 8 px off-centre.	style.css, .portal-status	Low	Add a short-height rule that trims the space reserved above and below the card.
B2	Sign-in page scrolls on short screens. About 60 px at 1024×600 when a notice such as "Please sign in to continue" shows; about 18 px on 320 px phones.	style.css, sign-in portal rules	Low	Tighten spacing further in the short-window rule, or accept as is.
B3	Sign-up, forgot-password and reset-password use the older plain layout while sign-in and the error screens use the portal design, so moving between them changes the look.	includes/layout/auth-header.php and the three pages	Low	Move them onto includes/portal.php. They were kept unchanged on purpose earlier; this is now a consistency candidate.
B4	Empty button row on finished registrations. Completed and withdrawn rows show "Not applicable" but still render an empty button container.	participants.php, actions cell	Info	Only output the button row when at least one action is allowed.
B5	University name wraps in the phone drawer. At 375 px "Bukidnon State University" breaks onto two lines beside the logo.	style.css, .sidebar .brand	Info	Slightly smaller sub-line or logo in the drawer, or accept the wrap.
B6	Announcement text width. Lines are capped at about 70 characters for readability, which leaves empty space on the right of wide cards.	style.css, .announcement-body	Info	Confirm the look, or widen the cap (for example 80ch).

C. Decisions needed

These need a choice from the unit or the team before any code changes.

#	Issue	Where	Priority	Suggested fix
C1	Email policy for sign-up. Any valid email is accepted; the label now says "Email address". Should students be required to use a BukSU address?	public/register.php	Info	If yes, add a domain check with a clear error; if no, nothing to do.
C2	Rights to the campus photo and BukSU logo. Both are now in the GitHub repository and public if the repository is public.	public/assets/img/	Info	Confirm the university allows this use, or make the repository private.
C3	Changes go straight to main. Every push so far has been committed directly to the main branch without review.	Git workflow	Info	Consider feature branches and pull requests once more people contribute.

D. Not yet verified

Not known to be broken, but not exercised in testing, so there is no evidence either way.

#	Issue	Where	Priority	Suggested fix
D1	Reset password with an expired form. Needs a real reset link, which writes to the database and can send email. It uses the same security check as the other forms.	public/reset-password.php	Info	Test once with a throwaway account and a generated reset link.
D2	Withdrawn registrations. The demo data has none; the rule is shared with completed registrations, which were tested.	participants.php	Info	Add one withdrawn registration to the demo data and re-check.
D3	Actions that change data: approving and rejecting real registrations, uploads, reservations, backups, exports and deletions were skipped by the crawl on purpose.	Across the system	Info	Run a scripted pass against a disposable copy of the database.
D4	Real email delivery (password reset, reminders) needs the SMTP settings in config.local.php.	includes/mailer.php	Info	Send one reset and one reminder to a test inbox.
D5	Crawl coverage. The crawl stopped at 140 pages per role because calendar month links go on indefinitely. No errors were found in what was covered.	All roles	Info	Re-crawl while skipping calendar paging to reach every page.

Appendix: repair for the garbled announcement (item A4)

Run once on any database imported before the seed-file fix. It replaces the corrupted byte sequence with a real em dash and touches nothing else:

```
UPDATE announcements
  SET body = REPLACE(body, CONVERT(0xC394C387C3B6 USING utf8mb4),
                      CONVERT(0xE28094 USING utf8mb4))
WHERE HEX(body) LIKE '%C394C387C3B6%';
```

Already fixed (for reference)

Pushed in commit 5fd5187: expired forms now answer 403 instead of 500; coordinators only see Edit on their own announcements; Approve and Reject are blocked on completed and withdrawn registrations (buttons and server); the seed files declare UTF-8; the sign-up label reads "Email address"; error screens use the portal design; the BukSU logo sits beside CASDevU in the sidebar. The earlier login redesign is commit b514f78.
